

DATA MODELING METHOD AND SYSTEM

ABSTRACT OF THE DISCLOSURE

A computer implemented method for presenting information is disclosed.

5 The method includes providing at least one database comprising a plurality of
data models, each of said data models containing a representation of data in a
space and time relationship, and being linked to other data models in flexible
hierarchical relationships. The method further includes presenting selected data
models such that the information can be viewed based on spatial relationships,
10 time relationships, hierarchical relationships, or any combination thereof.
